

Twake Mail management interface

Why?

- Save time to the team & automate common tasks
- Ease the delegation to a run team

(IE not just Benoit knows the magic command to run)

Who?

- Authorized linagora Ops

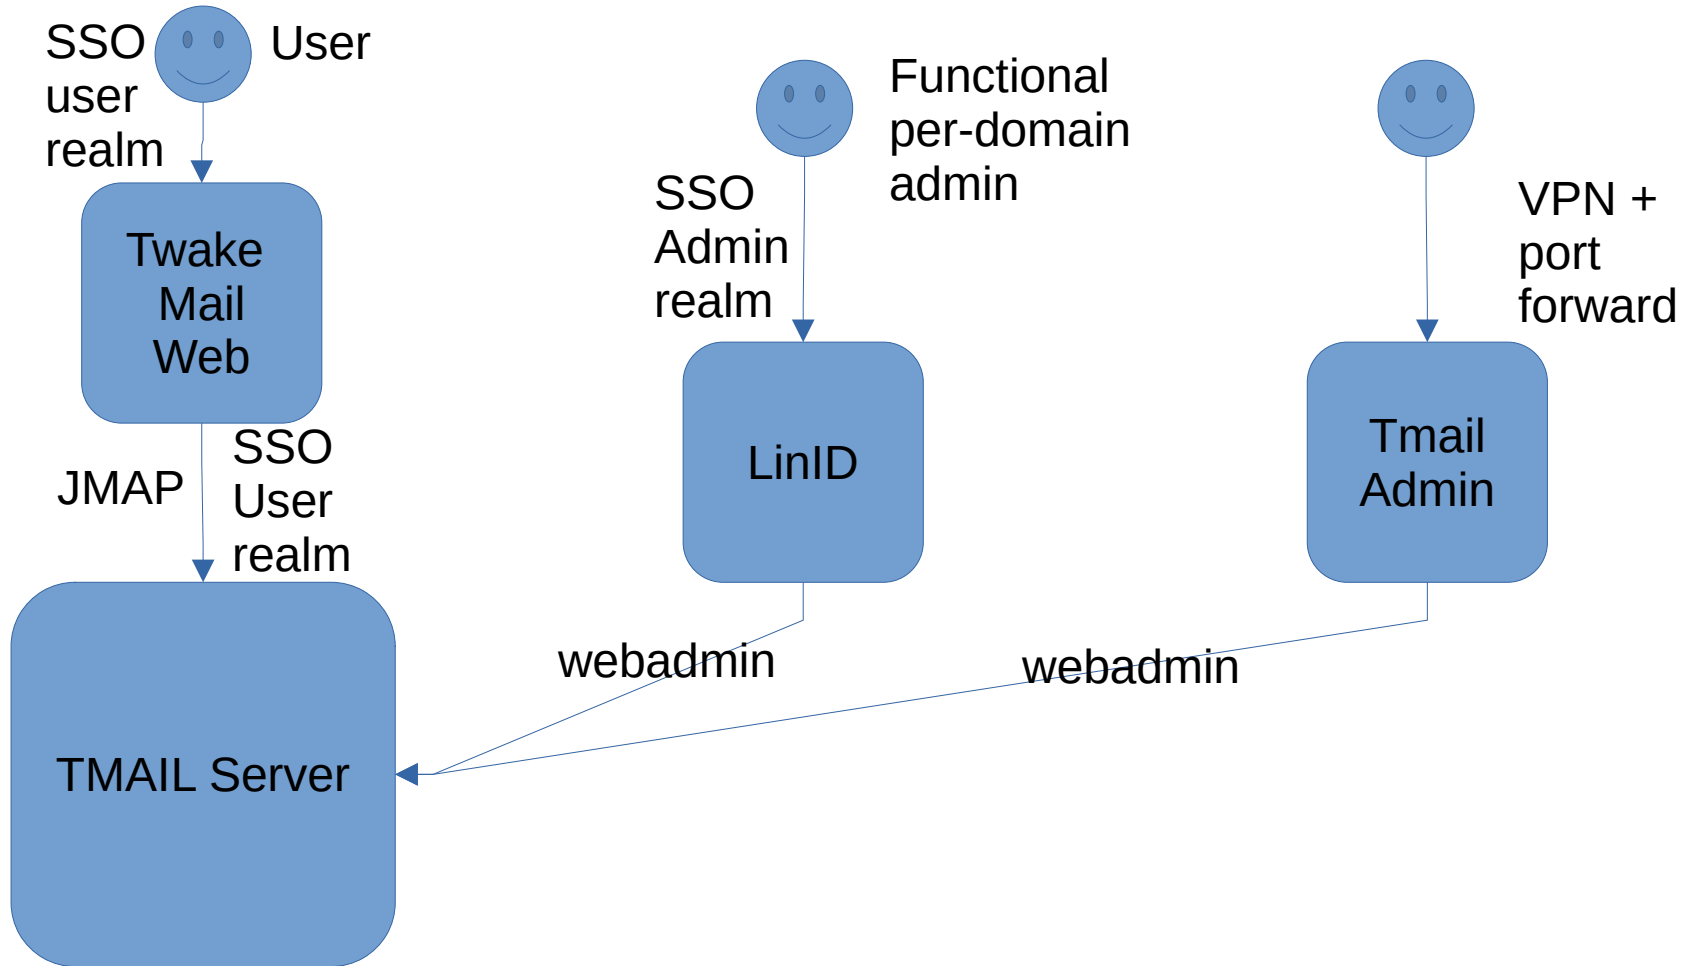

What?

- Front for webadmin – focussed on system management

How much?

JavaScript employee, 3 mois. Alternant JS, 1 year.

(fix outdated mode)

run

- Reindex all data in OpenSearch
(reindex all mode)

run

- Fix mailbox inconsistencies

run

- Fix message inconsistencies

run

- Recompute mailbox counters

run

- Recompute mailbox quota

run

- Fix mapping denormalization

run

- Cleanup JMAP uploads

run

- Blob garbage collection

run

`curl -XPOST /quota/users?
task=RecomputeCurrentQuotas\
&usersPerSecond=2"aComponent=MAILBOX`

Exact command on flyover + link to
the doc if clicked

Webadmin calls

- Healthcheck
- Mail Repositories
- Event dead letter
- Tasks
- Common tasks 1 2 3 4 5 6 7 8 9

Starting minimal development environment

- Minimal inmemory twake mail

<https://github.com/linagora/tmail-backend/blob/master/tmail-backend/apps/memory/README.md>

Provisioning script available

Good for most tasks.

Ask support for the backend team for populating data into mail repositories, dead letter.

Complete development environemnt

- Needed for some of the extra tasks

<https://github.com/linagora/tmail-backend/blob/master/tmail-backend/apps/distributed/README.md>
